## Introduction

## **OVERVIEW**

Emerson Process Management offers a wide variety of RTD and thermocouple sensors that are available alone or as complete assemblies including connection heads, thermowells, and extension fittings. In addition to complete assemblies, Emerson Process Management offers heads, coupling/nipple and union/nipple extensions, compression fittings, and thermowells.

## **Using this Product Data Sheet (PDS)**

Use this PDS to order complete temperature sensor assemblies, which include sensors, thermowells, extensions, and connection heads. These options can also be ordered separately. For example, you can order a thermowell, extension, or connection head for use with an existing sensor. In each case it is important to know and understand the sections of this PDS when specifying the items.

### **Threaded Sensors and Assemblies**

- Includes descriptions, specifications, and ordering information for Series 58C, 68, 68Q, and 78 RTDs, and the Series 183 thermocouples.
- Includes information for ordering sensors, connection heads, extensions, and thermowells as complete assemblies.

#### Calibration

- Includes characterization schedules and information for ordering calibrated Series 68, 68Q, and 78 RTD Sensors.
- Includes information regarding the use of Callendar-Van Dusen constants to match specific Series 68, 68Q, and 78 RTDs to Rosemount Smart Temperature Transmitters.

## **Mounting Accessories**

 Includes descriptions, specifications, and ordering information for temperature accessories such as thermowells, extensions, connection heads, mounting adapters, lead wire extensions, connectors, seals, and thermowells.

### **Hazardous Area Approvals**

 Includes descriptions of the FM, CSA, SAA, and ATEX approvals for sensors and connection heads.

## **Configuration Data Sheet**

Provides a form used for thermowell application calculations.

Series 58C, 68, 68Q, and 78 platinum RTD

temperature sensors are primarily used when high accuracy, durability, and long-term stability are required. These sensors conform to international standards: IEC-751, EN 60751, and BS EN 60751. (1)

Series 58C platinum RTD temperature sensors:

 Combine an economical thin-film design with a sheath that can be shortened to any length with tubing cutter.

Series 68Q Quick Response Sanitary RTD sensors:

 Conform to 3–A Sanitary Standards and feature product contact surfaces designed for CIP cleaning.

Series 68 platinum RTD temperature sensors:

• Provide high performance in an economical thin-film design.

Series 78 platinum RTDs temperature sensors:

 Use a wire-wound element which allows for a broader measurement range.

## **Thermocouples**

Series 183 thermocouple temperature sensors conform to ASTM E-230, and are available in types J, K, E, and T.

Series 183 thermocouple temperature sensors are available:

- · grounded or ungrounded
- · isolated or unisolated
- with immersion lengths from 2 to 48 inches.

<sup>(1) 100</sup> ohms at 0 °C,  $\alpha$  = 0.00385 ohms/ohm/°C

## The Use of 2-, 3-, and 4- wire RTDs

To help you attain the highest possible temperature measurement accuracy, Rosemount provides 4-wire sensors for all single element RTDs. You can use these RTDs in 2-, 3-, or 4-wire configurations by simply securing the unneeded leads with tape. To properly wire the 4-wire RTD for use in a 2-, 3-, or 4-wire configuration, refer to the following wiring diagrams:

#### 2-wire Configuration

2-wire RTDs provide one connection to each end of the sensor. In a 2-wire configuration, lead wires add resistance to the circuit which cannot be compensated. The 2-wire configuration is rarely used because the added lead wire resistance can cause substantial errors in the temperature reading.

### 3-wire Configuration

3-wire RTDs provide one connection to one end of the sensor, and two connections to the other end. The 3-wire approach does not eliminate all lead wire effects. However, for sensors with lead wires of the same length, lead wire effects are slight, and the approach provides reasonable accuracy.

## 4-wire Configuration

The most effective way to eliminate lead wire effects is with two connections at each end of the sensor. 4-wire RTDs fully compensate for lead wire effects.

## Benefits and Limitations of RTDs when compared to Thermocouples

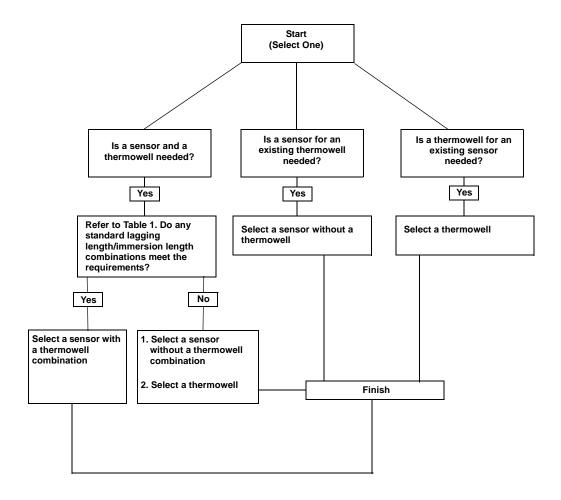

### Benefits:

- · Higher accuracy
- · Better linearity and long-term stability
- Cold junction compensation not required
- · Special extension lead wire not required
- · Less susceptible to noise
- Can be "matched" to a Rosemount transmitter with transmitter sensor matching

## Limitations

- Lower maximum temperature limit
- Slower response time in applications without a thermowell

## **HOW TO DECIDE WHAT TO ORDER**

## If Rosemount sensor and model code is visible on the Sensor:

- 1. If the thermowell is ordered separately (0078P23C30N060) 11th digit = 'N'
  - a. Start with immersion length digits 12-14; 060 = 6.0 in.
  - b. Add extension length digits 9 & 10; 30 = 3.0 in. (3 + 6 = 9)

Order the replacement sensor for the total length without connection heads (5th digit N) and extension (8th digit N) 0078N23N00N090

- 2. If the thermowell is ordered integral to sensor (0078P23C30A060W40) 11th digit = not 'N'
  - a. Immersion length 'U' is defined by the 12-14th digits; 060 = 6.0 in.
  - b. Look up 'L' length from the correct order chart for given 'U' length. This will be 4 inches for short sensors, or a whole number divisible by 3 for sensors longer than 4 inches (4, 6, 9, 12, 15, 18... inches); 'U' 060 = 9 inches 'L'
  - c. Add extension length as defined by 9th and 10th digits; 30 = 3.0 in. to the 'L' length found in table. (9" + 3" = 12", Length code 120)
  - d. This will be the replacement sensor length 'X'.

Order sensor without connection head (5th digit N) or extension (8th digit N) 0078N23N00N120

00813-0100-2654, Rev GB April 2010

## Sensors and Accessories (English)

### If model code is NOT visible on the sensor, follow one of the three instructions below:

- 1. Measure the inside depth of the thermowell \*preferred\*
  - a. Measure down the inside of the thermowell hole to the top-most face of the extension used, or the thermowell if no extension
  - b. This will be the replacement sensor length if depth = 12.0 in., sensor length will be 12 in.

### Order sensor without connection heads (5th digit N) or extension (8th digit N) 0078N23N00N120

- 2. Measure the overall outside length of the thermowell from end to end.
  - a. Measure down the outside of the thermowell from the tip to the end face of the extension if used, or the thermowell if no extension.
  - b. Subtract 1/4 in. to account for thickness of the thermowell at the tip.
  - c. This will be the replacement sensor length. Overall length = 12.25 in., the replacement will be 12 in.

### Order sensor without connection heads (5th digit N) or extension (8th digit N) 0078N23N00N120

- 3. Measure the old sensor length from tip to the flat face of the threaded process connection.
  - a. Determine if the sensor is spring loaded or general purpose (welded) where the sensor sheath meets the threaded adaptor.
  - b. For spring loaded sensors, the measurement of the exposed sheath from tip of the start of the threaded portion will be the same as the replacement sensor length.
    - Normal spring compression for a Rosemount sensor is assumed to be 1/2 in. and the normal thread engagement is also assumed to be 1/2 in.
    - Round to the nearest whole 1/4 in. increment as the spring will make up any small differences
    - Replacement sensor for a spring loaded sensor measuring 6.5 inches will be 6.5 in. length

Order sensor without connection heads (5th digit N) or extension (8th digit N) 0078N15N00N065

- c. For general purpose sensors with the distance from tip to threaded adapter:
  - Add <sup>1</sup>/<sub>4</sub> in. to allow clearance, preventing bottoming sensor during installation.
  - Add <sup>1</sup>/<sub>2</sub> in. for the thread engagement of the sensor in the thermowell.
  - The replacement sensor for a general purpose sensor measuring 5.75 in. from the tip to the threaded adaptor is 6.5 in.  $(5^3/4 + 1/4 + 1/2 = 6^1/2)$  in).

Order sensor without connection heads (5th digit N) or extension (8th digit N) 0078N15N00N065

## If model code is visible on the thermowell (0091A060W40T015P) follow the instructions below to determine sensor model number:

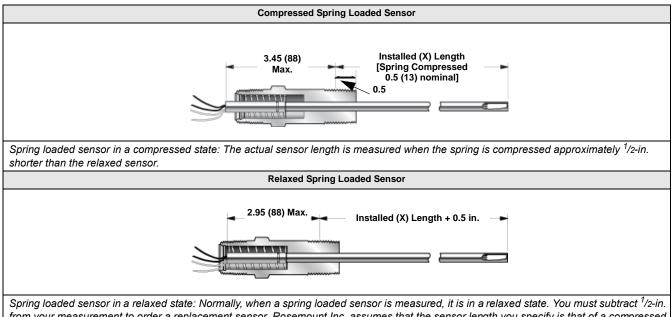

- a. Start with immersion length digits 6-8, 060 = 6.0 in.
- b. Add additional lagging length digits 13-15, 015 = 1.5 in.
- c. To those lengths add 1.5 in. (this is the additional standard lagging length on all Rosemount thermowells) 1.75 in. minus (0.25 in. thermowell tip thickness) = 1.50 in.
- d. 6.0 + 1.5 + 1.5 = 9 in.

Order replacement sensor 0078N23N00N090

## SPRING-LOADED SENSOR DIMENSIONS

When a spring-loaded sensor is used properly, the spring should be compressed approximately \(^1/2\)-inch. Therefore, all measurements of spring-loaded sensors are made with the spring compressed. If you measure an existing spring-loaded sensor while it is in a relaxed state, you must subtract \(^1/2\)-inch to arrive at the installed length (X) that must be ordered. See Figure 1.

FIGURE 1. Spring Loaded Sensors Dimensions

Spring loaded sensor in a relaxed state: Normally, when a spring loaded sensor is measured, it is in a relaxed state. You must subtract <sup>1</sup>/2-in. from your measurement to order a replacement sensor. Rosemount Inc. assumes that the sensor length you specify is that of a compressed sensor.

## Determining the Length (L) of a spring-loaded sensor to be used with an existing non-Rosemount Thermowell

See Figure 1, Figure 3, and Figure 4.

Remove the existing generic sensor from the installed thermowell.	Length Code Key			
Measure the sensor length with the spring in the relaxed state (as shown in	L Thermowell length minus 0.25 in.			
Figure 1). Measure from the tip of the sensor to the maximum thread engagement	U Immersion length into process			
point (0.53 in. into the threads).	T Lagging length			
3. Subtract 0.5 inches from your measurement. The resulting length is (X).	E Extension fitting length			
4. If the sensor is installed with an extension, measure the extension length (E), as	X Sensor length			
shown in Figure 4. If the sensor is not installed with an extension, let $(E) = 0$ .	Use the following equations to determine			
5. Since (X) = (E) + (L), subtract (E) from (X) to find (L).	all lengths			
Use the resulting length (L) in the Section 2 ordering tables to choose the correct length	L=U+T+1.5			
of sensor.	X = E + L			
	X = E + U + T + 1.5			

FIGURE 2. Thermowell Dimensions (use with Table 1)

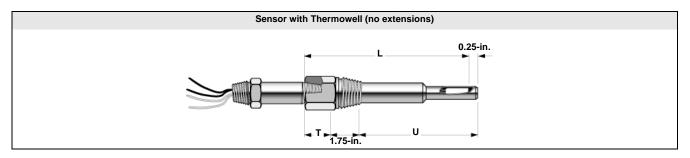

TABLE 1. Dimensions for thermowells when ordered with sensors (U), (L), and (T). Use with Figure 2.

					Dimensio	ons (in.) <sup>(1)</sup>

055	5.5	9.0	2.0	125	12.5	15.0	1.0	195	19.5	21.0	0.0
060	6.0	9.0	1.5	130	13.0	15	0.5	200	20.0	24.0	2.5
065	6.5	9.0	1.0	135	13.5	15.0	0.0	205	20.5	24.0	2.0
070	7.0	9.0	0.5	140	14.0	18.0	2.5	210	21.0	24.0	1.5
075	7.5	9.0	0.0	145	14.5	18.0	2.0	215	21.5	24.0	1.0
080	8.0	12.0	2.5	150	15.0	18.0	1.5	220	22.0	24.0	0.5
085	8.5	12.0	2.0	155	15.5	18.0	1.0	225	22.5	24.0	0.0

<sup>(1)</sup> L = U + T + 1.5

### Ordering a Sensor and a Thermowell

See Figure 2 and Table 1 and Figure 3 and Figure 4. Use the following Procedure to determine if a standard lagging length can be use with the sensor and thermowell.

- 1. Determine the (U), (T), and (E) lengths necessary for your installation. If you do not need an extension, (E) = 0 (zero).
  - Note: If your existing sensor/thermowell combination is different than Figure 3, refer to the drawings on the following pages.
- 2. Find your immersion length (U) on Table 1 above and compare the corresponding lagging length (T) to the lagging length that you previously determined.
- 3. If your lengths match the values on the line that corresponds to your required immersion length, order your sensor and thermowell together.

If your lengths do not match the values on the line that corresponds to your measured immersion length, order your sensor and thermowell separately. Solve for (L) using the equation (L) = (U) + (T) + 1.5 (since (L) is required when ordering the sensor separately from the thermowell).

## Length Code Key

- L Thermowell length minus 0.25 in.
- U Immersion length into process
- T Lagging length
- E Extension fitting length
- X Sensor length

Use the following equations to determine all lengths

$$L = U + T + 1.5$$
  
 $X = E + L$   
 $X = E + U + T + 1.5$ 

FIGURE 3. Series 68, 78, and 183 Sensor Assembly Dimensional Drawings

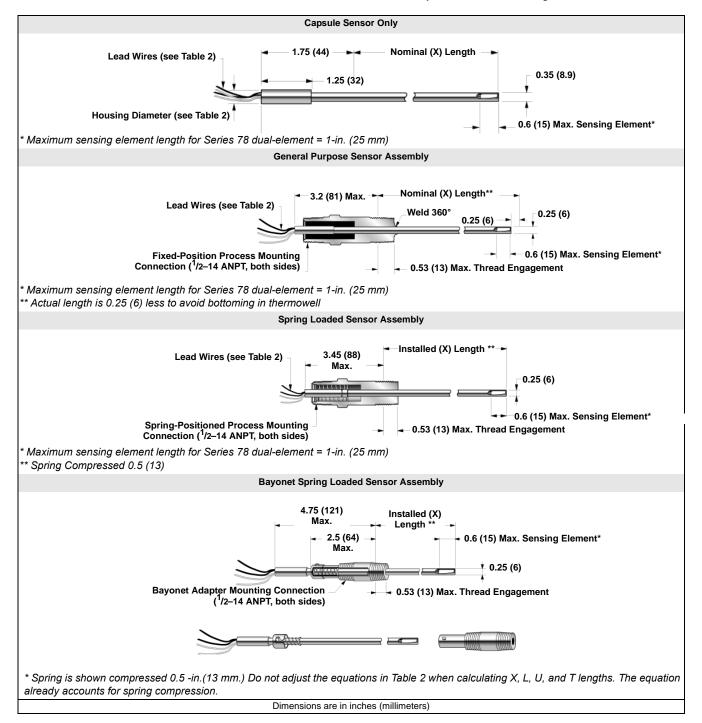

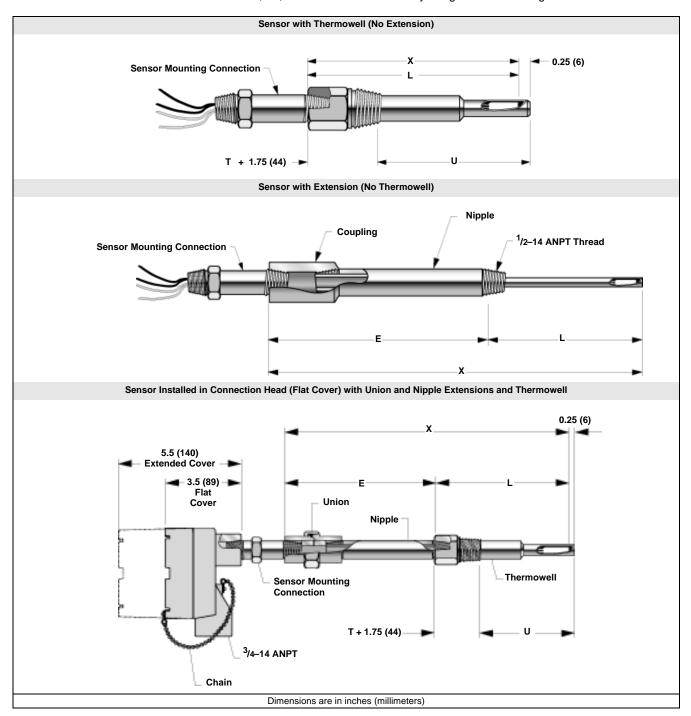

TABLE 2. Sensor Series and Dimensions

Series	Housing	Diameter	Lead Wires	Lead Wi	re Length	Series	Housing I	Diameter	Lead Wires	Lead Wir	e Length

FIGURE 4. Series 68, 78, and 183 Sensor Assembly Length Code Drawings

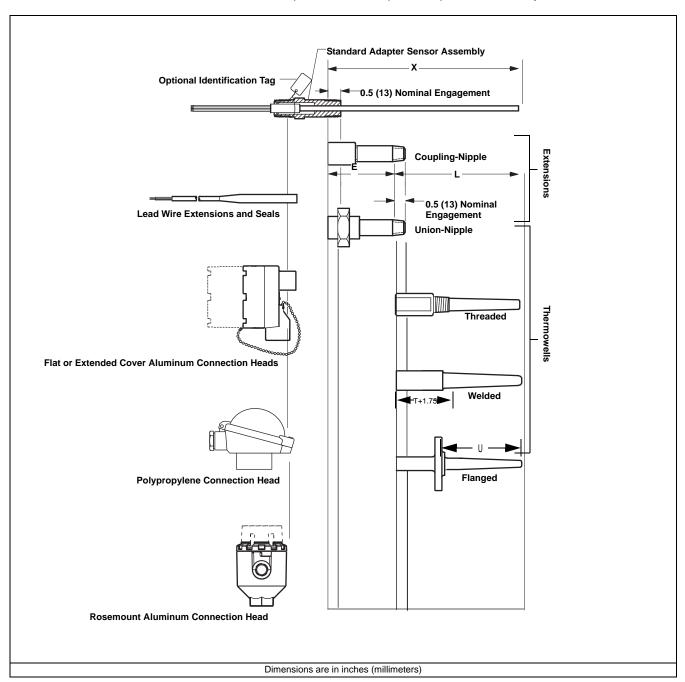

00813-0100-2654, Rev GB April 2010

## **Threaded Sensors and Assemblies**

Series 68, 68Q, and 78 RTD and Series 183 Thermocouple Sensors may be ordered as complete assemblies. These assemblies provide a complete, yet simple means of specifying the proper industrial hardware for most temperature measurements. One assembly model number, derived from one ordering table, completely defines the type of sensing element, as well as the material, length, and style of both the extension fittings and thermowells. All sensor assemblies are sized and inspected by Rosemount Inc. to ensure complete component compatibility and performance.

FIGURE 5. Individual Components of a Complete Temperature Assembly

### MOUNTING CONFIGURATIONS

#### Capsule

Capsules are designed for direct immersion without mounting fittings. Accessory compression fittings are available for adjustable mounting into a thermowell. See Mounting Adapters for Series 58, 68, 78, and 183.

### **General-Purpose Sensor Assemblies**

Designed with a welded, fixed-position <sup>1</sup>/2–14 ANPT process connection fitting for direct immersion or thermowell applications, this sensor design provides a moisture-proof and vapor-tight seal. The maximum static working pressure at 20 °C (68 °F) with no vibration or flow condition is 31.59 MPa (3,500 psig). The use of a thermowell is recommended for process pressure containment. Note that standard lengths are <sup>1</sup>/<sub>4</sub> inch less than nominal dimension to prevent bottoming of the sensor in a thermowell.

## **Spring-Loaded Sensor Assemblies**

Spring-loaded sensors have a spring-positioned, \$\$^{1}/2-14\$ ANPT process connection fitting that ensures good surface contact in thermowells for faster time response and vibration resistance. Spring-loaded sensors are not intended to provide a process seal. They must be used in conjunction with a thermowell for this purpose.

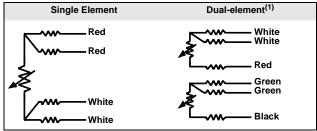

### NOTE

When a spring-loaded sensor is used properly, the spring should be compressed approximately <sup>1</sup>/<sub>2</sub>-inch.

### **Bayonet Spring-Loaded Sensor Assemblies**

Bayonet assemblies have the same advantages as the spring-loaded sensor. However, the bayonet connector permits the sensor to be easily removed from the process without tools.

FIGURE 6. Series 68, 68Q, 78, and 58C Lead Wire Configurations

(1) Dual-element sensors are only available on Series 68Q and 78 sensors.

### SERIES 68 PLATINUM RTD

Rosemount Series 68 Platinum resistance temperature sensors measure from –50 to 400 °C (–58 to 752 °F). Series 68 Class B, Pt100-385 sensors are available in capsule, general purpose, and spring-loaded designs in sensor lengths from 1 to 48 inches.

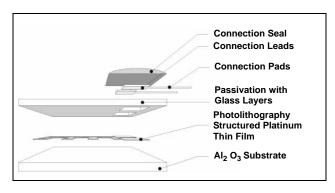

Table 3 shows the interchangeability of the Series 68 RTD. As an option, for maximum system accuracy, Rosemount Inc. can provide sensor calibration. See Sensor Characterization (Calibration) Schedules—Option Code V. In addition, Rosemount Inc. offers optional sensor-to-transmitter matching capability obtainable through the use of Callendar-Van Dusen Constants. See Option Code "V" Callendar-van Dusen Constants.

TABLE 3. Series 68 Interchangeability

• ±0.55 °C (±0.99 °F) at -50 °C (-58 °F)  • ±0.30 °C (±0.54 °F) at 0 °C (32 °F)  • ±0.80 °C (±1.44 °F) at 100 °C (212 °F)  • ±1.30 °C (±2.34 °F) at 200 °C (392 °F)  • ±1.60 °C (±2.88 °F) at 260 °C (500 °F)  • ±2.30 °C (±4.14 °F) at 400 °C (752 °F)	n in the contract of interest and ingentional
• ±0.80 °C (±1.44 °F) at 100 °C (212 °F)  • ±1.30 °C (±2.34 °F) at 200 °C (392 °F)  • ±1.60 °C (±2.88 °F) at 260 °C (500 °F)	• ±0.55 °C (±0.99 °F) at -50 °C (-58 °F)
• ±1.30 °C (±2.34 °F) at 200 °C (392 °F) • ±1.60 °C (±2.88 °F) at 260 °C (500 °F)	• ±0.30 °C (±0.54 °F) at 0 °C (32 °F)
• ±1.60 °C (±2.88 °F) at 260 °C (500 °F)	• ±0.80 °C (±1.44 °F) at 100 °C (212 °F)
	• ±1.30 °C (±2.34 °F) at 200 °C (392 °F)
• ±2.30 °C (±4.14 °F) at 400 °C (752 °F)	• ±1.60 °C (±2.88 °F) at 260 °C (500 °F)
	• ±2.30 °C (±4.14 °F) at 400 °C (752 °F)

#### Construction

FIGURE 7. Construction of a Platinum Thin Film RTD

Design and construction of the Series 68 Platinum Sensors provides the optimum combination of accuracy and durability available for temperature measurements. The construction of the sensor allows for direct immersion in non-corrosive fluids at reasonable static pressures. For corrosive environments or many industrial applications, these sensors are widely used with standard thermowell assemblies.

### **Platinum Element and Lead Wire Configurations**

Single-element temperature sensors have four lead wires and may be used in 2-, 3-, and 4-wire signal conditioning systems.

## 00813-0100-2654, Rev GB April 2010

## Sensors and Accessories (English)

## **Specifications**

### **Performance**

## **Temperature Range**

-50 to 400 °C (-58 to 752 °F)

## **Effect of Temperature Cycling**

 $\pm 0.05\%$  (0.13 °C or 0.23 °F) maximum ice-point resistance shift following 10 cycles over the specified temperature range.

### Stability

±0.11% maximum ice-point resistance shift following 1,000 hours at maximum specified temperature (400 °C).

### **Maximum Hysteresis**

±0.1% of operating temperature range.

#### **Time Constant**

12 seconds maximum required to reach 63.2% sensor response in water flowing at 3 ft/s (0.91 m/s).

#### Nominal R0 100 Ohm

Nominal alpha .00385 C-1

## **Physical Specifications**

### **Sheath Material**

316 SST. / 321 SST.

## **Lead Wire**

PTFE insulated, nickel-coated, 22-gauge stranded copper wire.

### **Identification Data**

The model, serial numbers, and up to six lines of permanent tagging information are etched on each sensor. Stainless steel tags are available upon request.

## Weight

- · Capsule sensors: 5 oz
- General-purpose and spring-loaded sensors: 9 oz

#### **Environmental**

### **Humidity Limits**

· Lead seal can withstanding 100% relative humidity.

#### Vibration Limits

 ±0.05% maximum ice-point resistance shift due to 30 minutes of 14 g peak vibration from 5 to 350 Hz at 20 °C (68 °F) for unsupported stem length of less than 6 inches.

#### **Quality Assurance**

 Each sensor is subjected to a resistance accuracy test at 0 °C and a insulation resistance test.

### **Enclosure Ratings**

 When installed properly, Rosemount Series 68 sensors are suitable for indoor and outdoor NEMA 4X and CSA Enclosure Type 4X installations. See Hazardous Area Approvals for complete installation information.

### **Insulation Resistance**

 $1000\times10^6$  ohms minimum insulation resistance when measured at 500 Vdc at room temperature.

00813-0100-2654, Rev GB April 2010

## Sensors and Accessories (English)

TABLE 4. Series 68 RTD Sensor Assemblies WITHOUT Thermowell

★ The Standard offering represents the most common options. The starred options (★) should be selected for best delivery.
The Expanded offering is subject to additional delivery lead time.

Assemble to	Options	
Standard		Standard
XA <sup>(9)</sup>	Assemble connection head or transmitter to a sensor assembly	*

- (1) Capsule style available in 1-in. increments only, starting at 1-in. (i.e. 1, 2, 3-inches, etc.) See "Mounting Adapters for Series 58, 68, 78, and 183" on page 66.
- (2) This option must be used with Sensor Lead Wire Termination code N and is not available with assembly code XA or with Approval codes E1, E5, E6, and E7.
- (3) General-purpose sensors are only available in (L) lengths of 2.5-in. or greater.
- (4) Spring loaded sensors must be installed in a thermowell assembly to meet the requirements of explosion-proof approvals code E6.
- (5) Not available with Sensor Lead Wire Termination codes R, P, or C or with approval codes E1, E5, E6, or E7.
- (6) 1-in. length without extension is only available in capsule style.
- (7) SAA Flame-proof Approval is only applicable if installed with Rosemount 248, 644, or 3144P transmitters.
- (8) These options are not available with Sensor Lead Wire Termination codes R, P, or W.
- (9) If ordering code XA with a transmitter, specify the same option on the transmitter model code.

Standard		Standard
XA <sup>(13)</sup>	Assemble connection head or transmitter to a sensor assembly	*

- (1) Not available with Sensor Lead Wire Termination codes R, P, or W.
- (2) Not available with option codes E1, E5, E6, and E7.
- (3) Codes A and C must be used with an extension length. Additional non-standard (E) lengths are available in 1/2-in. increments from 2.5 to 9-in.
- (4) Standard configuration with best delivery.
- (5) Available only with straight stem thermowells.
- (6) Thermowells with an overall length ("U" + "T" + 1.75-in.) of 36-in. or less are machined from solid barstock. Thermowells with an overall length larger than 42-in. will be constructed using a welded 3-piece design and are available only with a stepped stem style.
- (7) For additional (T) lengths, see Table 28 on page Temperature-71.
- (8) F88 to F08 cannot be used with 0-in. (T) length. F08 cannot be used with 0- or  $\frac{1}{2}$ -in. (T) length)
- (9) Limited to 24" immersion length and 316 or 304 SST materials only.
- (10) SAA flame-proof approval is only applicable if installed with a Rosemount 248, 644, or 3144P transmitter.
- (11) Available on flanged thermowells only.
- (12) Only one flange face option allowed.
- (13) If ordering option code XA with a transmitter, specify the same option on the transmitter model code.

## Sensors and Accessories (English)

## **SERIES 78 PLATINUM RTD**

Series 78 sensors are intended for applications that require high accuracy, dual-elements, and/or are subjected to high temperatures. Rosemount Series 78 Platinum Resistance temperature sensors measure from –200 to 600 °C (–328 to 1112 °F). These sensors are available in capsule, general-purpose, spring-loaded, and bayonet spring-loaded designs in sensor (X) lengths from 1 to 68 inches.

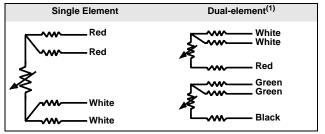

Table 7 shows the interchangeability of the Series 78 Pt100-385 sensors. The performance of the standard Series 78 sensor conforms to the standard set by IEC 751 Class B. Additionally, IEC-751 Class A accuracy is available as an option. For maximum system accuracy, Rosemount Inc. can provide sensor calibration. See Sensor Characterization (Calibration) Schedules—Option Code V. Rosemount Inc. also offers optional sensor-to-transmitter matching capability obtainable through the use of Callendar-Van Dusen Constants. See Option Code "V" Callendar-van Dusen Constantsand Option X8Q4: Sensor Calibrated to a Customer-Specified Temperature Range.

The wire-wound design and construction of the General-Purpose Series 78 sensor allows direct immersion in non-corrosive fluids at reasonable static pressures. For corrosive environments and in many industrial applications, these sensors are commonly used with standard thermowell assemblies.

#### **Platinum Element and Lead Wire Configurations**

Single-element high-temperature sensors have four lead wires and may be used in 2-, 3-, and 4-wire signal conditioning systems. Dual-element sensors have redundant elements to provide separate readout and control signals from a single measurement point. Dual-element sensors have three lead wires for each element and may be used with 2- or 3-wire systems. Dual-element sensors can also be wired to be used as compensation loop sensors (see Figure 8).

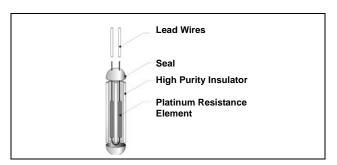

FIGURE 8. Wiring Configuration of a Dual-Element Sensor to Function as a Single Element Sensor with a Compensation Loop

(1) Dual-element sensors are only available on Series 68Q and 78 sensors.

### Construction

FIGURE 9. Construction of a Platinum Wire-wound RTD

## **Specifications**

### **Performance**

### **Temperature Range**

Series 78 single- and dual-element sensors may be used in temperatures from –200 to 500 °C (–328 to 932 °F). Series 78 single-element high-temperature sensors are provided for high-temperature service over the range of 0 to 600 °C (32 to 1112 °F).

## **Effect of Temperature Cycling**

 $\pm 0.04\%$  (0.10 °C or 0.18 °F) maximum ice-point resistance shift following 10 cycles between -200 and 500 °C (-328 to 932 °F).

#### Stability

 $\pm 0.05\%$  maximum ice-point resistance shift following 1,000 hours at 400 °C (752 °F).

### **Accuracy**

TABLE 7. Series 78 Interchangeability

Standard Series 78 IEC-751 Class B	Temperature
±0.80 °C (±1.44 °F)	-100 °C (-148 °F)
±0.30 °C (±0.54 °F)	0 °C (32 °F)
±0.80 °C (±1.44 °F)	100 °C (212 °F)
±1.80 °C (±3.24 °F)	300 °C (572 °F)
±2.30 °C (±4.14 °F)	400 °C (752 °F)
Series 78 with IEC-751 Class A Option	Temperature
±0.35 °C (±0.63 °F)	-100 °C (-148 °F)
±0.15 °C (±0.27 °F)	0 °C (32 °F)
±0.35 °C (±0.63 °F)	100 °C (212 °F)
±0.75 °C (±1.35 °F)	300 °C (572 °F)
±0.95 °C (±1.71 °F)	400 °C (752 °F)

## **Maximum Hysteresis**

- Single- and dual-element, Nominal R0 100 Ohm Nominal alpha .00385  $\Omega/\Omega$  °C.
- Single-element, high temperature: ±0.1% of range.

## **Time Constant**

4 seconds maximum required to reach 63.2% sensor response in water flowing at 3 ft/s (0.91 m/s), 9.5 seconds for single-element high-temperature sensors.

## **Self Heating**

18 mW minimum power dissipation required to cause a 1  $^{\circ}$ C (1.8  $^{\circ}$ F) temperature measurement error in water flowing at 3 ft/s, 25 mW for single-element high temperature sensors.

## Insulation Resistance

 $500\times10^6$  ohms minimum insulation resistance when measured at 500~V dc at room temperature [20 °C (68 °F)]. Single element high-temperature sensors are measured at 100V dc.

### **Environmental**

## **Humidity Limits**

Lead seal is capable of withstanding 100% relative humidity.

#### **Vibration Limits**

Standard single- and dual-element sensors:

 ±0.03% maximum ice-point resistance shift due to 30 minutes of 21 g peak vibration from 5 to 350 Hz continuous sweep at 20 °C (68 °F) for unsupported stem length of less than 5.5 inches (140 mm).

Single-element high-temperature sensors:

 Meet ASTM E 1137-95. Cycling time is 3 hours per longitudinal axis, less the time spent at resonant dwells at the axis, from 5 to 500 Hz. The test level is 1.27 mm (0.05 in.) double amplitude displacement or peak g-level of 3, whichever is less

### **Quality Assurance**

Each sensor is subjected to a resistance accuracy test at 0  $^{\circ}\text{C}$  and an insulation resistance test.

### **Enclosure Ratings**

When installed properly, Rosemount Series 78 sensors are suitable for indoor and outdoor NEMA 4X and CSA Enclosure Type 4X installations. See Hazardous Area Approvals for complete installation information.

## **Physical Specifications**

#### **Sheath Material**

316 SST

### **Lead Wires**

PTFE-insulated, nickel-coated, 22-gauge stranded copper wire.

#### **Identification Data**

The model and serial numbers and up to six lines of permanent tagging information are etched on each sensor. Stainless steel tags are available upon request.

## Weight

Capsule sensors: 5 oz
 General purpose and spring-loaded sensors: 9 oz

## English) 00813-0100-2654, Rev GB April 2010

## Sensors and Accessories (English)

- (1) Capsule style available in 1-in. increments only. See "Mounting Adapters for Series 58, 68, 78, and 183" on page Temperature-66.
- (2) Must be used with Sensor Lead Wire Termination code N and is not available with assembly option XA or with approval option codes E1, E5, E6, or E7.
- (3) Spring loaded sensors must be installed in a thermowell assembly to meet the requirements of explosion-proof approval option code E6.
- (4) This option is not available with Sensor Lead Wire Termination codes R, P or C or approval code E1, E6, and E7.
- (5) Codes A and C must be used with an extension length. Additional non-standard (E) lengths are available in <sup>1</sup>/2-in. increments from 2.5 to 9-in.
- (6) Additional lengths are available up to 68-in., increments of 1-in.
- (7) The IEC 751 Class A option is not available with high-temperature sensors.
- (8) SAA Flameproof approvals only applicable if installed with a Rosemount 248, 644, or 3144P transmitter.
- (9) Requires Sensor lead wire termination code N
- (10) If ordering option code XA with a transmitter, specify the same option on the transmitter model code.

- (1) Not available with Sensor Lead Wire Termination codes R, P or W.
- (2) Not available with Approval codes E1, E6, or E7.
- (3) Codes A and C must be used with an extension length. Additional non-standard (E) lengths are available in 1/2-in. increments from 2.5 to 9-in.
- (4) Standard configuration with best delivery.
- (5) Available only with straight stem flanged thermowells.
- (6) Straight or Tapered stem only.
- (7) F88 to F08 cannot be used with 0-in. (T) length. F08 cannot be used with 0- or  $\frac{1}{2}$ -in. (T) length
- (8) Limited to 24" immersion length and 316 or 304 SST materials only.
- (9) The IEC 751 Class A option is not available with high-temperature sensors.
- (10) SAA Flameproof approvals only applicable if installed with a Rosemount 248, 644, or 3144 transmitter.
- (11) These options are not available with Sensor Lead Wire Termination codes R, P, or W.
- (12) Available on flanged thermowells only.
- (13) Only one flange face option allowed.
- (14) If ordering option code XA with a transmitter, specify the same option on the transmitter model code.

## Sensors and Accessories (English)

## SERIES 68Q SANITARY PLATINUM RTD

Rosemount Series 68Q sanitary RTD temperature sensors measure from –50 to 200 °C (–58 to 392 °F). Series 68Q sensors are available in Tri-Clamp<sup>®</sup> endcap designs in immersion lengths from 1.0 to 9.5 inches. Table 12 shows the interchangeability of the Series 68Q sensor.

### **Accuracy**

TABLE 12. Series 68Q Interchangeability (IEC 751 Class B)

_	• •
±0.55 °C (±0.99 °F) at –50 °C (–58 °F)	
±0.30 °C (±0.54 °F) at 0 °C (32 °F)	
±0.80 °C (±1.44 °F) at 100 °C (212 °F)	
±1.30 °C (±2.34 °F) at 200 °C (392 °F)	

### Construction

Series 68Q sensors conform to 3-A Sanitary Standards and feature product contact surfaces designed for CIP cleaning. The response times of Series 68Q sensors meet the Grade A Pasteurized Milk Ordinance (PMO) specification for thermometric response of an indicating thermometer on a pipeline.

Series 68Q sensors are offered in a Tri-Clamp sanitary endcap configuration. The sensor capsule is welded into the 316 SST sanitary endcap/stem assembly. The product contact of this assembly is polished to a finish that exceeds No. 4 minimum finish as required by the 3–A Sanitary Council Standard #74-02.

## **Platinum Element and Lead Wire Configurations**

Single-element temperature sensors have four lead wires and may be used in 2-, 3-, and 4-wire signal conditioning systems. Dual-element sensors have six lead wires and may be used in 2- and 3-wire signal conditioning systems.

## **SPECIFICATIONS**

## **Performance**

### **Temperature Range**

-50 to 200 °C (-58 to 392 °F)

### **Maximum Hysteresis**

±0.09% of operating temperature range

#### Stability

Tri-clamp O.D. Tube Size 1-in. and greater:

±0.04% maximum ice-point resistance shift following 1,000 hours at maximum specified temperature 392 °F (200 °C).

Tri-clamp O.D. Tube Size <sup>1</sup>/<sub>2</sub> - <sup>3</sup>/<sub>4</sub>-in.:

 $\pm 0.08\%$  maximum ice-point resistance shift following 1,000 hours at maximum specified temperature 392 °F (200 °C).

### **Response Time**

Tri-clamp O.D. Tube Size 1-in. and greater

Less than 3.5 seconds required to reach 63.2% sensor response in water flowing at 3 ft/s (0.91 m/s). Meets PMO specification

Tri-clamp O.D. Tube Size  $^{1}/_{2}$  -  $^{3}/_{4}$ -in.:

Less than 1.5 seconds required to reach 63.2% sensor response in water flowing at 3 ft/s (0.91 m/s).

#### **Insulation Resistance**

 $500\times 10^6$  ohms minimum insulation resistance when measured at 100 V dc at room temperature

#### **Surface Finish**

32R<sub>A</sub> standard finish on product contact surfaces. Meets 3-A requirements

15R<sub>A</sub> high mechanical polish available with option code HP.

## **Environmental**

#### **Humidity Limits**

Lead seal is capable of withstanding 100% relative humidity

## **Quality Assurance**

Each sensor is subjected to a resistance accuracy test at 0 °C

## **Physical Specifications**

#### **Sheath Material**

316 SST

### **Lead Wire**

PTFE-insulated, nickel-coated, 24-gauge stranded copper wire

#### **Identification Data**

The model and serial numbers and up to six lines of permanent tagging information are etched on each sensor. Stainless steel tags are available upon request

## Weight

0.6 to 2.0 lb (0.3 to 0.9 kg)

## **Dimensional Drawings**

#### **SERIES 58C PLATINUM RTD**

Rosemount Series 58C sensors are available in 12-, 24-, 36-, and 48-inch (X) lengths and may be shortened to any desired length with an ordinary tubing cutter. This cut-to-fit feature eliminates the need to stock a large selection of sensors in many specific lengths. Table 15 shows the interchangeability of the Series 58C Sensor.

TABLE 15. Series 58C Interchangeability (IEC 751 Class B)

, , , , , , , , , , , , , , , , , , , ,

#### **SERIES 183 THERMOCOUPLE**

Rosemount Series 183 Thermocouple sensors measure from -180 to 1150 °C (-292 to 2102 °F).

#### Construction

The Series 183 Thermocouples are manufactured using ISA Type J, K, E, or T wire with "special limits of error" accuracy. The junction of these wires is fusion-welded to form a pure joint, to maintain the integrity of the circuit, and to ensure the highest accuracy. Grounded junctions are available for improved response time and good thermal contact with protection from the environment. The ungrounded and isolated junctions provide electrical isolation from the sensor sheath (see Figure 11).

Rosemount thermocouples are encased in a protective metal sheath. The sheath material is 304 SST for types J, E, and T, used at temperatures up to 871 °C and Inconel for type K, used at temperatures up to 1150 °C. Metallic oxide insulation is compacted into the sheath to mechanically support and electrically insulate the thermocouple wire. See Table 22 for more information on the different types of thermocouples.

FIGURE 11. Series 183 Junction Configurations

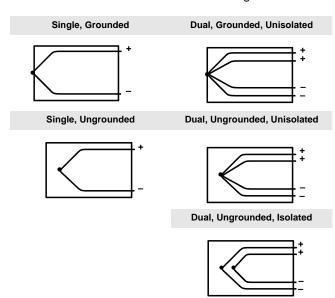

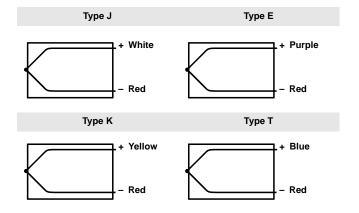

FIGURE 12. Series 183 Lead Wire Configurations

#### **Specifications**

#### **Performance Specifications**

The thermoelectric current relationship in a thermocouple is standardized and defined by ASTM E-230. All Series 183 Thermocouples conform to these standards with "special limits of error" accuracy. The particular characteristics of each ISA type thermocouple are outlined in Table 22.

#### **Physical**

#### **Sheath Material**

304 SST for types J, E, and T (used at temperatures up to 871 °C). Inconel for type K (used at temperatures up to 1150 °C).

#### **Lead Wires**

Thermocouple, internal—16 AWG solid wire (max), 18 AWG solid wire (min.). External lead wires—20 AWG wire, PTFE-insulated. Color coded per lead wire configuration schematic shown in Figure 12.

#### **Identification Data**

The model and serial numbers and up to six lines of permanent tagging information are etched on each sensor. Stainless steel tags are available upon request.

#### Weight

Capsule sensors: 5 ounces. General-purpose and spring-loaded sensors: 9 ounces.

#### Insulation Resistance

 $100 \times 10^6$  ohms minimum insulation resistance when measured at 100 V dc at room temperature.

#### **Enclosure Ratings**

When installed properly, Rosemount Series 183 sensors are suitable for indoor and outdoor

NEMA 4X and CSA Enclosure Type 4X installations. See Hazardous Area Approvals for complete installation information.

XA <sup>(9)</sup>	Assemble connection head or transmitter to a sensor assembly	*				

- (1) This option must be used with Sensor Lead Wire Termination code N and is not available with assembly options XA.
- (2) Cannot be used with approval option codes E1, E5, E6, or E7. See "Mounting Adapters for Series 58, 68, 78, and 183" on page Temperature-66.
- (3) Spring-loaded sensors must be installed in a thermowell assembly to meet the requirement option code E6.
- (4) This option is not available with explosion-proof approval option code E6.
- (5) Bayonet spring-loaded style is available to 45-inches but is not available with Sensor Lead Wire Termination codes R, P, or W.
- (6) Codes A and C must be used with an extension length. Additional non-standard (E) lengths are available in <sup>1</sup>/2-in. increments from 2.5 to 9-in.
- (7) SAA Flameproof approvals only applicable if installed with a Rosemount 248, 644, or 3144 transmitter.
- (8) ATEX Flameproof approval is only applicable if ordered with Sensor Lead Wire Terminator code D, R, P. T. or L (Rosemount connection head) or installed with Rosemount 248, 644, or 3144P transmitters.
- (9) If ordering option code XA with a transmitter, specify the same option on the transmitter model code.

XA <sup>(14)</sup>	Assemble connection head or transmitter to a sensor assembly	★			

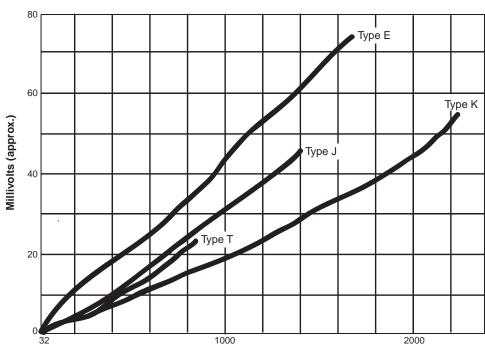

- (1) This option is not available with explosion-proof approval option codes E1, E5, E6, or E7.
- (2) Bayonet spring-loaded style available to 45 inches. Codes 31 35 are not available with Sensor Lead Wire Termination codes R or P.
- (3) Codes A and C must be used with an extension length. Additional non-standard (E) lengths are available in 1/2-in. increments from 2.5 to 9-in.
- (4) Standard configuration with best delivery.
- (5) Available only with straight stem thermowells.
- (6) Thermowells with an overall length ("U" + "T" + 1.75-in.) of 36-in. or less are machined from solid barstock. Thermowells with an overall length larger than 42-in. will be constructed using a welded 3-piece design and are available only with a stepped stem style.
- (7) For additional (T) lengths, see Table 28 on page Temperature-71.
- (8) Straight or Tapered stem thermowells only.
- (9) Cannot be used with 0-in. (T) length. F08 cannot be used with 0- or <sup>1</sup>/2-in. (T) length
- (10) Limited to 24" immersion length and 316 or 304 SST materials only.
- (11) SAA Flameproof approvals only applicable if installed with a Rosemount 248, 644, or 3144P transmitter.
- (12) Available on flanged thermowells only.
- (13) Only one flange face option allowed.
- (14) If ordering option code XA with a transmitter, specify the same option on the transmitter model code.

### **Comparison of Thermocouples**

**Degrees Farenheit** 

Thermocouple	Conditions for Use
Type J Iron / Constantan	Maximum operating temperature of 760 °C (1400 °F). Used with or without protective tubing where deficiency of free oxygen exists. Protective tube not essential, but desirable for cleanliness and longer service.
Type K Chromel / Alumel	Suitable for extended use in temperature reaching 1150 °C (2102 °F). Use of metal or ceramic protective tube desirable, especially in reducing atmospheres. in oxidizing atmospheres, protective tubing necessary only to promote cleanliness and longer service.
Type E Chromel / Constantan	Suitable for use at temperature p to 900 °C (1652 °F) in vacuum r inert, mildly oxidizing or reducing atmosphere. Not subject to corrosion at cryogenic temperatures. Has highest EMF output per degree of all commonly used thermocouples.
Type T Copper /Constantan	Operating temperature range of –180 to 371 °C (–292 to 700 °F). Use in either oxidizing or reducing atmospheres. Protective tubing necessary only to promote cleanliness and longer service. Stable at lower temperature. Superior for a wide variety of uses in cryogenic temperatures.

TABLE 22. Characteristics of Series 183 Thermocouple Types

ISA	1911		ure Range	
Thermocouple Types	Thermocouple Wire Alloys	°C	°F	Limits of Error (Interchangeability)
J	Iron/Constantan	0 to 760	32 to 1400	±1.1 °C or ±0.4% of measured temperature, whichever is greater
K	Chromel/Alumel	0 to 1150	32 to 2102	±1.1 °C or ±0.4% of measured temperature, whichever is greater
E	Chromel/Constantan	0 to 871	32 to 1600	±1.0 °C or ±0.4% of measured temperature, whichever is greater
Т	Copper/Constantan	-180 to 0	-292 to 32	±1.0 °C or ±1.5% of measured temperature, whichever is greater
		0 to 371	32 to 700	±0.5 °C or ±0.4% of measured temperature, whichever is greater

### Calibration

#### CALIBRATION OPTIONS

Sensor calibration may be required for input to quality systems, or for control system enhancement. More frequently, it is used to improve the overall temperature measurement performance by matching the sensor to a temperature transmitter. Transmitter-Sensor matching is available for RTD sensors used with Rosemount 644, 3144P, and 3244MV temperature

transmitters where the inherent stability and repeatability of the RTD technology is well established.

### **Transmitter-Sensor Matching** Using Callendar-Van Dusen Constants

Significant temperature measurement accuracy improvement can be attained using a temperature sensor that is matched to a temperature transmitter. This matching process entails teaching the temperature transmitter the relationship between resistance and temperature for a specific RTD sensor. This relationship, approximated by the Callendar-Van Dusen equation, described as:

$$R_t = R_o + R_o \alpha [t - \delta(0.01t - 1)(0.01t) - \beta(0.01t - 1)(0.01t)^3],$$
  
where:

R<sub>t</sub> = Resistance (ohms) at Temperature t (°C)

 $R_0$  = Sensor-Specific Constant (Resistance at t = 0 °C)

 $\alpha$  =Sensor-Specific Constant

δ =Sensor-Specific Constant

 $\beta$  =Sensor-Specific Constant (0 at t > 0 °C, 0.11 at t < 0 °C)

The exact values for  $R_0$ ,  $\alpha$ ,  $\delta$ ,  $\beta$ , – known as Callendar-Van Dusen (CVD) constants - are specific to each RTD sensor, and are established by testing each individual sensor at various temperatures.

The calibration temperature values using the CVD equation are divided into two major temperature areas: above 0 °C and below 0 °C. The calibration for the temperature range between 0 and 660 °C is obtained from the following formula:

$$R_t = R_0 \left\{ 1 + \alpha \left[ t - \delta \left( \frac{t}{100} \right) \left( \frac{t}{100} - 1 \right) \right] \right\}$$

Note that this is a modification of the fourth-order CVD equation where  $\beta = 0$  for temperatures greater than 0 °C. Since this modified equation is a second-order degree equation, at least three distinct temperature values are needed in order to curve fit the behavior of the RTD. For the temperature range from 0 to 100 °C only these two end points are used, and an approximation is made to render the constants.

Once the sensor-specific constants are entered, the transmitter uses them to generate a custom curve to best describe the relationship between resistance and temperature for the particular sensor and transmitter system. Matching a Series 68 or 78 RTD sensor to a 644, 3144P, and 3244MV transmitter typically results in a 3- or 4-fold improvement in temperature measurement accuracy for the total system. This substantial system accuracy improvement is realized as a result of the transmitter's ability to use the sensor's actual resistance-vs.-temperature curve instead of an ideal curve.

An example of the benefits of using the sensor matching capability of a Rosemount 3144P Temperature transmitter along with a matched Series 68 RTD sensor are shown in Typical Transmitter-Sensor Matching Uncertainty Improvements.

#### **Calibration Uncertainty**

Calibration uncertainties of the lab are equal to or better than 1/10 IEC 751 Class B interchangeability:

Uncertainty =  $0.03 + 0.0005 \times |t|$ 

|t| = absolute value of temperature in °C

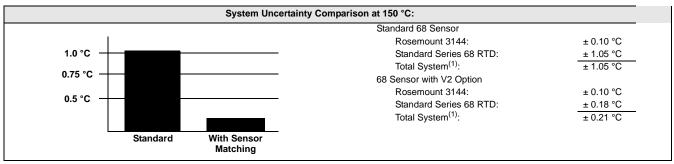

#### TYPICAL TRANSMITTER-SENSOR MATCHING UNCERTAINTY IMPROVEMENTS

**Transmitter:** 3144 (has built-in sensor matching capabilities), span of 1 to 200 °C, accuracy = 0.1 °C)

Sensor: Series 68 RTD Callendar van Dusen Option: V2 Process Temperature: 150 °C

Tempe	erature	Sensor Interd		Total Calibrated Sensor Uncertainty <sup>(1)</sup>			
°C	°F	°C	°F	°C	°F		
0	32	±0.30	±0.54	±0.10	±0.18		
50	122	±0.55	±0.99	±0.17	±0.31		
100	212	±0.80	±1.44	±0.22	±0.40		
150	302	±1.05	±1.89	±0.18	±0.32		
200	392	±1.30	±2.34	±0.16	±0.29		

(1) Includes calibration uncertainties of the lab, hysteresis, and repeatability.

(1) Calculated using RSS statistical method:

 $SystemAccuracy = \sqrt{(TransmitterAccuracy)^2 + (SensorAccuracy)^2}$ 

#### ORDERING INFORMATION

# Sensor Characterization (Calibration) Schedules – Option Code V

Series 68, 68Q, and 78 RTD sensors can be ordered with an option (V1, V2,...V7, see Option Code "V" Callendar-van Dusen Constants), that provides Callendar-Van Dusen constants that are shipped with the sensor. When you order this option, the values of all four sensor-specific constants are physically attached to each sensor with a wire-on tag. Rosemount 644, 3144P, and 3244MV have a unique, built-in sensor matching capability. To use this capability, the four sensor-specific constants are programmed into the 644, 3144P, and 3244MV at the factory by ordering a C2 option on the transmitter, or easily entered and changed in the field using a HART Communicator or AMS. When these values are entered into a Rosemount 644, 3144P, and 3244MV, the sensor and transmitter become *matched*.

Each "V" option is specific to a particular temperature range for a given sensor type (see Option Code "V" Callendar-van Dusen Constants). As with option code X8Q4, the accuracies associated with each option code represent worst-case conditions when the sensor is used over the entire temperature range.

For applications requiring the increased accuracy obtainable through a matched sensor and transmitter, order the appropriate "V" option (seeOption Code "V" Callendar-van Dusen Constants). To ensure optimal performance, select a "V" option such that the sensor's range of actual operation is between the minimum and maximum calibration points.

The accuracy (uncertainty) of different calibration points varies because each calibration schedule has specific hysteresis and repeatability characteristics. For example, the accuracy of calibration points at 100 °C for options V1 and V2 differs because of the two different temperature ranges.

#### NOTE

An RTD ordered with the V option is shipped with CVD constants only; it does not include calibration tables.

<sup>(1)</sup> Includes only the uncertainly of the lab.

#### **Ordering Information**

FIGURE 13. Typical Sensor Ordered with Option Code V

<sup>(2)</sup> Includes the uncertainty of the lab, hysteresis, and repeatability.

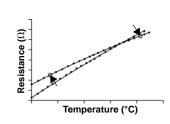

<sup>(3)</sup> Uncertainties are valid for option code X8Q4 when ordered with the corresponding temperature range. The largest error shown in each temperature range is the worst case error for all points not shown in that range.

<sup>(4)</sup> Only available with Series 78 High Temperature Sensors 10-in. or longer.

#### **Option Code X8Q4**

The X8Q4 option calibrates the sensor to a customer-specified temperature range. The X8Q4 report includes the Callendar-Van Dusen (CVD) constants ( $R_{\text{o}},\,\alpha,\,\delta,\,\beta$ ), a resistance-versus-temperature table in one-degree increments, and a graph which includes the maximum errors due to the uncertainty of the calibration equipment, hysteresis, and repeatability. The values in the tables are calculated using Callendar-Van Dusen methodology. Two of the values on this table could be used to perform a two-point trim. The X8Q4 option also provides the CVD constants on a stainless steel tag attached to the sensor. See Figure 16.

#### FIGURE 14. Graph of a Typical Two-point Trim

A two-point trim shifts the ideal cuwe up or down, and changes the slop based on the two characterized points.

#### Option X8Q4: Sensor Calibrated to a Customer-Specified Temperature Range

When you order an RTD with the X8Q4 option, you must specify a temperature range over which the sensor is to be calibrated. Before specifying the range, take careful note of the sensor temperature limits.

#### **Ordering Example:**

Typical Model Number	Model	Lead Wire Termination	Sensor Type	Extension Type	Extension Length	Thermowell Material	Immersion Length	Additional Options
	0068	N	11	N	00	N	045	X8Q4 X8X9Q4

If X8Q4 and X9Q4 are both required, do not repeat the "Q4" code in the model string. Include the following instead:

Calibrate from -10 to 120 °C

### **Option Code X9Q4**

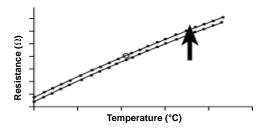

The X9Q4 option calibrates the sensor at a single customer-specified point. A calibration certificate with the resistance value at this point is supplied. This value could be used to perform a one-point trim on the transmitter. All characterizations are traceable to the National Institute of Standards and Technology (NIST). The calibration table is dated and marked with the sensor series and serial number.

See Figure 17.

#### NOTE

The X9Q4 option can be ordered and used in conjunction with the X8Q4 option.

#### FIGURE 15. Graph of a Typical One-point Trim

A one-point trim shifts the ideal curve up or down based on the single characterized point.

#### Option X9Q4: Sensor Calibrated to a Customer-Specified Single Point

When you order an RTD with the X9Q4 option, you must specify a single temperature point at which the sensor is to be calibrated. Before specifying the point, take careful note of the sensor temperature limits.

#### **Ordering Example:**

Typical Model Number	Model	Lead Wire Termination	Sensor Type	Extension Type	Extension Length	Thermowell Material	Immersion Length	Additional Options
Number	0068	N	11	N	00	N	045	X9Q4

If X8Q4 and X9Q4 are both required, do not repeat the "Q4" code in the model string. Include the following instead:

X8X9Q4

Calibrate at 50 °C

#### Callendar - Van Dusen Method Of Temperature Interpolation

$$R_{t} = R_{0} \left\{ 1 + \alpha \left[ t - \delta \left( \frac{t}{100} \right) \left( \frac{t}{100} - 1 \right) - \beta \left( \frac{t}{100} - 1 \right) \left( \frac{t}{100} \right)^{3} \right] \right\}$$

#### Where:

 $R_1$  = Resistance at temperature t,  $\Omega$ 

 $R_0$  = Resistance at temperature 0°C

t = Temperature, °C

 $\alpha$ ,  $\beta$ , and  $\delta$  = Calibration Constants

 $\beta = 0$  for t > 0° C

#### Alternate Form Of The Callendar - Van Dusen Interpolation Equation

$$R_t = R_0 [1 + At + Bt^2 + Ct^3(t - 100)]$$

Where:

 $R_1 = Resistance$  at temperature t,  $\Omega$ 

 $R_0 = Resistance$  at temperature  $0^{\circ}C$ 

t = Temperature, °C

A, B, and C = Calibration Constants

C = 0 for t > 0° C

The Callendar - Van Dusen method of temperature interpolation is the method utilized by the Rosemount Inc. 3144 and 3244 Temperature Transmitters.

<sup>(2)</sup> Includes uncertainty of the lab and repeatability.

### **Mounting Accessories**

#### **ROSEMOUNT CONNECTION HEAD**

The Rosemount Connection head is for general-purpose and spring-loaded sensors. The terminal block has six terminals for either single or dual element sensors. If the sensor assembly is ordered assembled to a Rosemount 248 or 644H head mount transmitter then the terminal block is replaced by the transmitters.

#### **Specifications**

Sensor Connection

 1/2–14 NPT mounting thread. Screw terminals for lead wire connections.

**Electrical Connection** 

<sup>1</sup>/<sub>2</sub>–14 NPT conduit

Materials of Construction

- · Housing: Low copper aluminum
- Paint: Polyurethane
- · Cover O-ring: Buna-N

Weight

• 18.5 oz (524 g)

**Enclosure Rating** 

• NEMA 4X, IP66, and IP68

#### POLYPROPYLENE CONNECTION HEAD

The polypropylene connection head (part number 00644-4198-0011) is designed for use with sanitary sensors. It is FDA-compliant, and is resistant to attack by acids, alkalies, and organic solvents.

#### **Specifications**

Sensor Connection

 1/2–14 NPT mounting thread. Screw terminals for lead wire connections

**Electrical Connection** 

<sup>1</sup>/<sub>2</sub>–14 NPT conduit

Materials of Construction

- Housing: White polypropylene polymer
- · O-Ring Seal: Silicone rubber
- Terminals: Nickel-plated brass

Temperature Limits

• -73 to 104 °C (-100 to 220 °F)

Weight

• 0.5 lb

#### CONNECTION HEAD

The Extended Cover Connection Head (P/N 00079-0324-xxxx) provides the additional space required by sensors that have bayonet connectors. This model can also be used with general-purpose and spring-loaded sensors. The terminal block has six terminals for either single- or dual-element sensors.

The Flat Cover Connection Head (P/N 00079-0325-xxxx) is for general-purpose and spring-loaded sensors. The terminal block has six terminals for either single- or dual-element sensors.

#### **Specifications**

Sensor Connection

 1/2–14 ANPT mounting thread. Screw terminals for lead wire connections

**Electrical Connection** 

• 3/4-14 ANPT conduit

Materials of Construction

- · Housing: Low-copper aluminum alloy
- · O-Ring Seal: Silicone rubber
- · Terminals: Nickel-plated brass

Temperature Limits

Head Type	Unapproved	E5 option	E6 option	E1 option
Painted	-100 to 100 °C	−50 to 85 °C	−50 to 85 °C	-40 to 65 °C
	–148 to 212 °F	–58 to 185 °F	–58 to 185 °F	−40 to 149 °F
Unpainted	-100 to 200 °C	−50 to 85 °C	−50 to 200 °C	-40 to 65 °C
	-148 to 392 °F	–58 to 185 °F	–58 to 392 °	–40 to 149 °F

#### **Enclosure Ratings**

 When installed properly, painted connection heads are suitable for indoor and outdoor NEMA 4X and CSA Enclosure Type 4X installations. When installed properly, unpainted connection heads are suitable for NEMA 4 and CSA Enclosure Type 4 installations. See Hazardous Area Approvals for complete installation information

#### Weight

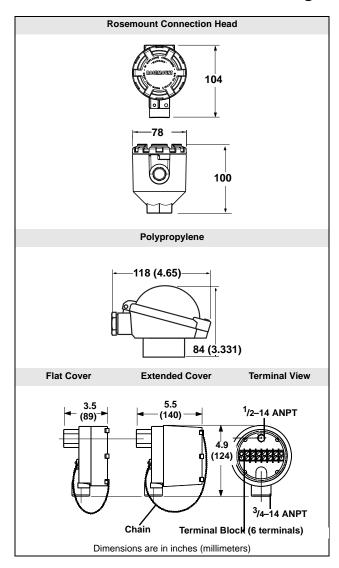

- 2 lb 8 oz (extended cover)
- 1 lb 9 oz (flat cover)

April 2010

007903550900	9.0-in.		

Standard configuration with best delivery. Also available for emergency requirements. Consult factory for information.

#### **Choosing an Extension**

Aside from ambient temperature variations, the heat from the process is transferred from the thermowell to the transmitter housing. If the process temperature is near or beyond specification limits, consider the use of additional thermowell lagging, an extension nipple, or a remote mounting configuration to isolate the transmitter from the excessive temperatures. Use Figure 19 and the example below to determine an adequate thermowell extension length.

FIGURE 19. 3144 Transmitter Housing Temperature Rise versus Extension Length for a Test Installation

#### Example

The rated ambient temperature specification is 85 °C. If the maximum ambient temperature is 40 °C and the process temperature to be measured is 540 °C, the maximum allowable housing temperature rise is the rated temperature specification limit minus the existing ambient temperature (85 – 40), or 45 °C. As shown in Figure 19, an extension (E) dimension of 3.0-in (76 mm) will result in a housing temperature rise of 30 °C. An "E" dimension of 3-in. would therefore be the minimum recommended length, and would provide a safety factor of about 15 °C. A longer

to reduce errors caused by transmitter temperature effect, although in that case the transmitter would probably require extra support. If a thermowell with lagging is used, the "E" dimension may be reduced by the length of the lagging.

"E" dimension, such as 6-in. (152 mm), would be desirable in order

### MOUNTING ADAPTERS FOR SERIES 58, 68, 78, AND 183

#### M5-M7, Sensor Compression Fittings, 316 SST

- For adjustable sensor length.
- For low pressure applications (100 psig maximum).
- Fits ¼-inch diameter sensors.
- Available with <sup>1</sup>/<sub>8</sub>–27 (M5), ¼–18 (M6), and ½–14 (M7) ANPT process threads.
- Not available on spring-loaded sensors.

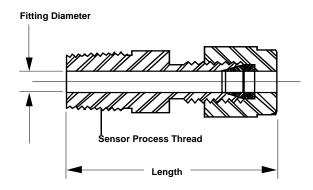

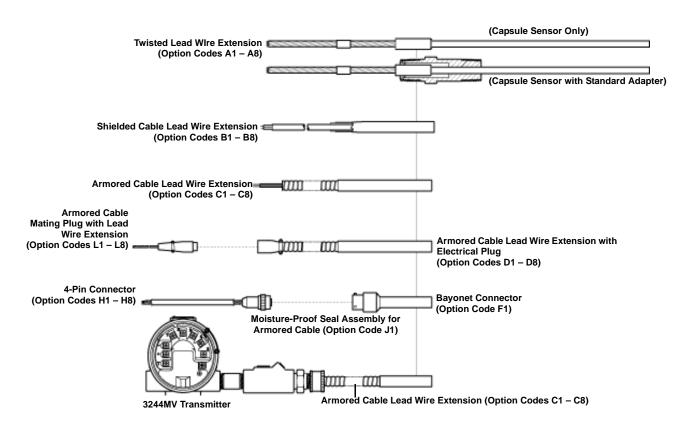

TABLE 26. Compression Fittings, 316 SST (for attachment to the stem of the capsule)

Model Number	Option Code	Sensor Process Thread Fitting Diameter		Length		
			in.	mm	in.	mm
C07961-0005	M5	<sup>1</sup> /8–27 ANPT	0.25	6.35	1.31	33.27
C07961-0006	M6	<sup>1</sup> /4–18 ANPT	0.25	6.35	1.5	38.1
C07961-0008	M7	<sup>1</sup> /2–14 ANPT	0.25	6.35	1.75	44.45

### LEAD WIRE EXTENSIONS, CONNECTORS, AND SEALS

The following options are available on most Series 68 and 78 sensors. They are not available for use on Series 58C, 68Q, and 183 sensors or with SAA or ATEX/ISSeP Flameproof approval (Option Codes E7 or E1).

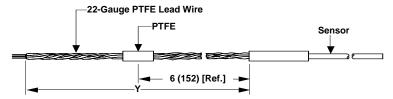

#### A1-A8, Twisted Lead Wire Extension

- Lead wire connections are silver brazed and individually insulated by shrinkable PTFE tubes
- Withstands 95 percent relative humidity
- 200° C (392° F) maximum temperature
- · Available with single or dual-element sensors

Option Code	Y Length (ft)
A1	1 <sup>1</sup> /2
A2	3
A3	6
A4	12

Option Code	Y Length (ft)
A5	24
A6	50
A7	75
A8	100

Not available for use with Series 68Q Sanitary RTDs and 183 thermocouples or with SAA or ATEX/ISSeP flameproof approval (option codes E7 or E1)

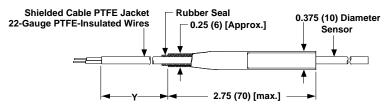

Dimensions are in inches (millimeters)

#### B1-B8, Shielded Cable Lead Wire Extension

- Copper shielded cable prevents electrical noise distortions to sensor signal output
- · Withstands 95 percent relative humidity
- 200° C (392° F) maximum temperature

Option Code	Y Length (ft)
B1	1 1/2
B2	3
B3	6
B4	12

Option Code	Y Length (ft)
B5	24
B6	50
B7	75
B8	100

Not available for 58C, 68Q, and 183 sensors or with SAA or ATEX/ISSeP flameproof approval (option codes E7 or E1)

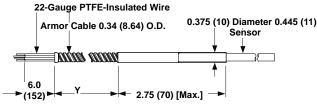

Dimensions are in inches (millimeters)

#### C1-C8, Armored Cable Lead Wire Extension

- Provides lead wire protection in heavy duty environments.
- · Withstands 95 percent relative humidity
- 200° C (392° F) maximum temperature
- · Available with single or dual-element sensors

Option Code	Y Length (ft)
C1	1 1/2
C2	3
C3	6
C4	12

Option Code	Y Length (ft)
C5	24
C6	50
C7	75
C8	100

Not available for 58C, 68Q, and 183 sensors or with SAA or ATEX/ISSeP flameproof approval (option codes E7 or E1)

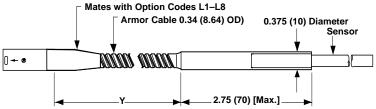

Dimensions are in inches (millimeters)

# D1-D8, ARMORED CABLE LEAD WIRE EXTENSION WITH ELECTRICAL PLUG

- Provides lead wire protection in heavy-duty environments
- · Provides quick-disconnect capability
- Withstands 95 percent relative humidity

Option Code	Y Length (ft)
D1	1 1/2
D2	3
D3	6
D4	12

Option Code	Y Length (ft)
D5	24
D6	50
D7	75
D8	100

Not available for 58C, 68Q, and 183 sensors or with SAA or ATEX/ISSeP flameproof approval (option codes E7 or E1)

Dimensions are in inches (millimeters)

00813-0100-2654, Rev GB April 2010

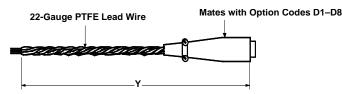

## Sensors and Accessories (English)

#### L1-L8, ARMORED CABLE MATING PLUG WITH LEAD WIRE EXTENSION

- · Completes quick-disconnect capability for armored cable
- · Withstands 95 percent relative humidity
- Twisted lead wire extension for lowest cost installation

Option Code	Y Length (ft)
L1	1 <sup>1</sup> /2
L2	3
L3	6
L4	12

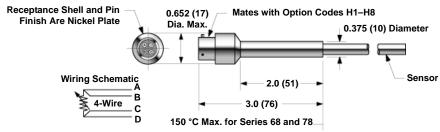

Option Code	Y Length (ft)		
L5	24		
L6	50		
L7	75		
L8	100		

Not available for 58C, 68Q, and 183 sensors or with SAA or ATEX/ISSEP flameproof approval (option codes E7 or E1) Dimensions are in inches (millimeters)

#### F1, 4-PIN BAYONET CONNECTOR

- · Provides quick-disconnect capability
- · Withstands 100 percent relative humidity with connector mate
- · Available for capsule and general purpose with 4-wire lead wire configuration only

Not available for 58C, 68Q, and 183 sensors, or with FM or CSA explosion-proof, or with SAA or ATEX/ISSEP flameproof approval (option codes E5, E6, E7, or E1)

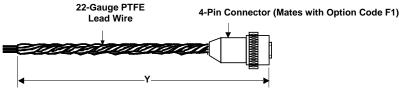

Dimensions are in inches (millimeters)

#### H1-H8, 4-PIN CONNECTOR MATING PLUG WITH LEAD WIRE EXTENSION

- Completes the quick-disconnect capability of connector
- · Provides twisted lead wire extension for remote installations
- · Withstands 100 percent relative humidity with connector mate
- F1 connector is required if H1-H8 lead wire extension is used

Option Code	Y Length (ft)		
H1	1 <sup>1</sup> /2		
H2	3		
H3	6		
H4	12		

Option Code	Y Length (ft)		
H5	24		
H6	50		
H7	75		
H8	100		

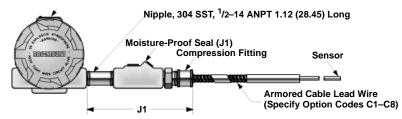

Not available for 58C, 68Q, and 183 sensors, or with FM or CSA explosion-proof, or with SAA or ATEX/ISSeP flameproof approval (option codes E5, E6, E7, or E1)

Dimensions are in inches (millimeters)

# J1, MOISTURE-PROOF SEAL ASSEMBLY FOR ARMORED CABLE

- · Prevents moisture migration through armored cable
- For use in humid environments but not for direct liquid immersion
- Non-disconnectable type assembly with armored cable and sensor

Not available for 58C, 68Q, and 183 sensors, or with FM or CSA explosion-proof, or with SAA or ATEX/ISSeP flameproof approval (option codes E5, E6, E7, or E1).

Moisture-proof seal assembly must be ordered with armored cable lead wire extension (option codes C1 – C8)

Dimensions are in inches (millimeters)

#### **THERMOWELLS**

To simplify ordering, the previous Series 79, 80, and 81 thermowell offerings are all included in the new Series 91 thermowell option.

#### **Materials**

Rosemount Thermowells are supplied in most materials required for industrial applications. Standard materials are 316 SST, 304 SST, and C1018 carbon steel. For corrosive environments, special materials such as Monel<sup>®</sup>, Hastelloy<sup>®</sup>, and Inconel 600 are available. Consult factory for other material availability.

#### Strength (Pressure and Flow Vibration)

The strength of a thermowell depends on several parameters that relate thermowell construction to the installation environment. For most industrial applications, standard Rosemount thermowells provide the necessary strength if the material, style, and length are correct for the application. The proper selection of a thermowell depends on fluid type, temperature, pressure, and fluid velocity. It is important to note that most thermowell failures are caused by vibration that is induced by fluid flow. If static pressure strength is a major consideration, refer to Table 27 for standard material ratings for a  $^{1}$ /2-inch tip. Tapered thermowells are offered for additional strength.

#### **Strength Calculation**

Rosemount Inc. has the ability to perform thermowell frequency calculations to verify that the thermowell dimensions you provide are appropriate for your specific application. To take advantage of this calculation, fill out and return the Configuration Data Sheet.

#### Construction

All thermowell bodies with an overall length less than 42-in. are machined from solid bar stock to ensure water-tightness. Flange mounts are welded to the thermowell body. Standard construction provides immersion lengths (U) from 2½ to 48 inches with overall lengths (L) from 4 to 59 inches respectively. Thermowells with overall lengths larger than 42-in. will be a 3-piece welded construction. Consult the factory for more information on welded 3-piece construction thermowells.

#### **Identification Data**

The part number is etched on each thermowell. Additional tagging for specific customer requirements is available.

#### Installation

For dimensional drawings of Thread Mounted, Weld Mounted, and Flange Mounted Thermowells, refer to Figure 20, 22, and 24.

TABLE 27. Thermowell Material Rating

		Process Rating <sup>(1)</sup> (psi) at Temperature (°F)						
Material	Recommended Usage	0°F	300 °F	500 °F	700 °F	900 °F	1100 °F	1300 °F
304 SST	Good resistance to oxidation	5600	4800	4700	4600	3400	2400	780
316 SST	Good resistance to corrosion. Better resistance to chemical attack than 304 SST	5600	5400	5300	5200	4400	3200	1250
Carbon Steel	For non-corrosive service	3700	3700	3700	3650	2000	<b>—</b>	_

<sup>(1)</sup> In case of an explosion, the integrity of the thermowell is maintained to the specified pressures.

- (1) Thermowells with an overall lengths ("U" + "T" + 1.75-in.) of 36-in. or less are machined from solid bar stock. Thermowells with an overall length larger than 42-in. will be constructed using a welded 3-piece design and are available only with a stepped stem style.
- (2) Available in straight stem only
- (3) Not available with 0-in. (T) length.
- (4) Not available with 0- or <sup>1</sup>/2-in. (T) length.
- (5) Limited to 24" immersion length and 316 or 304 SST materials only.
- (6) Maximum (U) length = 42.0-in.
- (7) Available on flanged thermowells only.
- (8) Only one flange face option allowed.
- (9) Maximum (U) length = 22.5 inches.
- (10) Not available on flanged thermowells and L lengths longer than 24".

### **Hazardous Area Approvals**

#### **SENSORS**

#### Factory Mutual (FM) Approval

E5 Explosion Proof for Class I, Division 1, Groups B, C, and D. Dust-Ignition Proof for Class II/III, Division 1, Groups E, F, and G. Suitable for indoor and outdoor (NEMA 4X) hazardous locations. Install in accordance with Rosemount drawing 00068-0013.

#### Canadian Standards Association (CSA) Approval

Explosion Proof for Class I, Division 1, Groups B, C, and D. Dust-Ignition Proof for Class II/III, Division 1, Groups E, F, and G. Suitable for Class I, Division 2, Groups A, B, C, and D. Suitable for indoor and outdoor (CSA Enclosure Type 4X) hazardous locations. Install in accordance with Rosemount drawing 00068-0033.

To ensure approval compliance install sensors in exact accordance with the specified installation drawings (see Figure 27).

#### **CONNECTION HEADS**

#### Factory Mutual (FM) Approval

E5 Explosion Proof for Class I, Division 1, Groups B, C, and D. Dust-Ignition Proof for Class II/III, Division 1, Groups E, F, and G. Painted models are suitable for indoor and outdoor (NEMA 4X) hazardous locations. Unpainted models are suitable for indoor and outdoor (NEMA 4) hazardous locations. When used with temperature sensors, connection heads must be installed in accordance with Rosemount drawing 00068-0013.

#### Canadian Standards Association (CSA) Approval

E6 Explosion Proof for Class I, Division 1, Groups C, and D. Dust-Ignition Proof for Class II/III, Division 1, Groups E, F, and G. Suitable for Class I, Division 2, Groups A, B, C, and D.

Painted models are suitable for indoor and outdoor (CSA Enclosure Type 4X) hazardous locations. Unpainted models are suitable for indoor and outdoor (CSA Enclosure Type 4) hazardous locations. When used with temperature sensors, connection heads must be installed in accordance with Rosemount drawing 00068-0033.

To ensure approval compliance, install connection heads in exact accordance with the specified installation drawings (see Figure 27).

# SENSOR AND TRANSMITTER ASSEMBLIES

#### **ATEX Approval**

E1 ATEX Explosion- proof
Certificate Number: KEMA99ATEX8715
ATEX Marking: ☑ II 2 G
EEx d IIC T6 (- 40°C ≤ T<sub>amb</sub> ≤ +65°C)

Rosemount Series 68 and 78 RTD and Series 183 thermocouple temperature sensors with spring-loaded or general purpose style sensors are approved only for direct mount to the Rosemount 3144P, 3244MV, 644, 244E, 144H, and 248 or mounted to the Rosemount Connection Head.

To ensure approval compliance, specify the E1 option on both the sensor and the transmitter at the time of ordering.

#### NOTE

Rosemount series 68 and 78 RTD and Series 183 Thermocouple Temperature Sensors can be supplied as a replacement part with the E1 option for installation in an existing temperature measurement assembly.

#### Standard Association of Australia (SAA) Flameproof Approval

Ex d IIC T6 (T<sub>amb</sub> = -20 to 60 °C) Rosemount Series 68 and 78 RTD and Series 183 thermocouple temperature sensors with spring-loaded or general purpose style sensor adapters are approved for direct mount to the Rosemount 144, 244E, 644, 3144 and 3244MV Smart Temperature Transmitters or mounted to the Rosemount Connection Head.

To ensure approval compliance, specify the E7 option on both the sensor and the transmitter at the time of ordering, and install in exact accordance with Rosemount drawing 03144-0225 (see Figure 30).
